

To Whom It May Concern,

We use the MBCD 1.3 laboratory coating machine in our company since 2013. We have done several trail tests for transdermal patches and Sublingual films with this machine. The machine provided very good function and very user friendly . Optimags also provide excellent service to answer all of our users' questions. That is why Optimags is the first choice when we plan to purchase our next coating machine for mass production.

Yours Sincerely,

Michelle Lai
